

Galina P. Litvintseva

A. Personal Statement

I has been engaged in institutional research for about 17 years, both in theoretical and practical fields. The matters of formal and informal institutions quality assessment are particularly complicated. In Russia and other federal countries institutions should be studied with consideration of their regional specific features.

The second area I am interested in is people quality of life, among them population quality (including health), population wealth, quality of working life, social sphere quality, health and safety (including ecological problems). The quality of life is linked to economic and social institutions.

The basis of wealth is population incomes. In order to assess differentiation of population money incomes the authorial method for accounting of ruble purchasing power parity in regions of Russia is applied. This method allowed to improve the analysis level of large information massives in social statistics.

In the university I teach Institutional economics and Methodology of economic science, supervise scientific and research work of students and post-graduates. Also I am a head of the scholar school named “Novosibirsk school of institutional economics and economic policy”.

As a chief academic secretary of the Novosibirsk branch of higher education academy of sciences (a regional non-profit organization) I address practical matters of integration of researchers from different institutes, pedagogic technologies and strengthening the role of pedagogic society in the modern world.

I support high ethic standards in scientific research and educational process.
